

PACO MOTO

Paco Motorsports eccentric locks

Thanks for purchasing our eccentric locks. These will ensure that you alignment cams / eccentrics won't slip, saving alignments, headaches, and wasted track days.

WARNING: Not everyone can perform every installation. It is critical that you be honest with yourself in regards to your ability. We're more than happy to help, but there are only so many things we can do from the other end of a phone / computer. If in doubt, discuss the install with us before you dive in. Improper installation could cause injury and/or property damage.

1. Perform an alignment as normal, **WITHOUT** the locks installed.
2. Install the locks as shown. If the outside piece doesn't fit with the orientation of the bolt, flip it over - the teeth are offset. Tighten the bolt to factory torque specs, and never worry about slipping eccentrics again. (You must only tighten suspension bolts with the car sitting on the ground with it's weight on the suspension and tires. Tightening with the car "in the air" can result in poor suspension performance, improper ride height, and damaged/torn bushings.)
